

Shalini Rao

United States | (949) 413-0217 | raoshalinid@gmail.com | www.shalinidrao.com

Product designer with 5 years of experience primarily in B2B SaaS, working cross-functionally with product in workflow design and user research. Comfortable in codebases, fast with AI tools, and thrives when teams are small and the surface is broad.

TECHNICAL SKILLS

Design: Figma, Sketch, Design Systems, Wireframing, Prototyping, Information Architecture

Research & Strategy: UX Research, User Testing, Competitive Analysis, Datadog, Pendo

AI & Engineering: Figma Make, Claude, HTML/CSS/JavaScript, Python/C, React, GitHub

EXPERIENCE

Arc XP — *Product Designer 2*

September 2022 - May 2026

Arc XP is a B2B SaaS content management system owned and distributed by The Washington Post, empowering publishers and broadcasters to deliver high-quality content worldwide.

- Led the redesign of Arc XP's primary video editing workflow, rebuilding a 10+ year old Angular interface into a React experience consistent with the broader product suite. Owned UX end-to-end from initial user research through QA, working with a PM on rollout strategy and beta phasing. Reduced video publish turnaround by over 50%.
 - Identified audio as a gap in Arc XP's asset management suite and drove it from zero to a shipped multi-phase product. Conducted competitive analysis across six platforms, wrote a formal recommendation against pursuing podcast monetization, and defined scope across three release phases including AI text-to-speech. Prototyped the V1 in Figma Make; shipped product reflects the original prototype with minimal deviation.
 - Designed a video analytics dashboard for enterprise publishers, surfacing engagement, monetization, and error metrics at aggregate and individual video levels. Research grounded in 37 survey respondents and interviews with customer organizations, several of whom had flagged Arc's analytics gaps as a retention risk. Iterated within hard technical constraints to ship a v1 that removed support burden from customer success and engineering.
 - Explored a platform-wide AI writing assistant integrated into Arc XP's editorial authoring product, designing field-level treatment states and trust patterns for non-deterministic outputs. Ran user research and worked through open questions around editorial control and AI action placement, building a design framework flexible enough to scale across the suite.
 - Built and maintained a centralized design system supporting 12+ distinct products, contributing component changes directly in GitHub alongside Claude-generated technical documentation. Led a card component redesign that had to account for varying asset types across the entire product suite.
-

EDUCATION

Carnegie Mellon University

May 2022

BS. Information Systems and Human Computer Interaction

- Led two independent product teams delivering solutions for a nonprofit and an ed-tech startup. Owned problem definition, solution scoping, and full design through handoff.
